PROFILE SUMMARY

Cybersecurity undergraduate with practical experience in VAPT, SOC operations, and security research. Skilled in identifying vulnerabilities, analyzing threats, and supporting incident response through hands-on projects and internships. Demonstrated impact through a responsible disclosure to CERT-In and the development of security-focused solutions for phishing detection, intrusion monitoring, and secure logging.

TECHNICAL SKILLS

VAPT: SQL Injection, XSS, IDOR, CSRF, Auth Bypass, OWASP Top 10, CVSS Scoring, Recon, Enumeration
SOC: Threat Detection, SIEM (Splunk), Incident Response, IOC Analysis, MITRE ATT&CK, Threat Hunting, IR Playbooks
Tools: Burp Suite, Nmap, SQLmap, FFUF, Gobuster, Nikto, Wireshark, Metasploit, Kali Linux, Python, Flask, Java
Networking: TCP/IP, DNS, HTTP/S, Packet Analysis, Service Enumeration, Protocol Analysis, Log Analysis

EXPERIENCE

- Ethical Hacking Intern** Dec 2025 – Jan 2026
Hackup Technology Coimbatore, India
- Executed black-box penetration testing on 5+ authorized targets with Nmap (-sV -O --script vuln), mapping 5 exposed services (SSH, MySQL, SMTP, IMAP, RPCBind) into attack-surface profiles per OWASP Testing Guide v4.
 - Identified and validated OWASP Top 10 vulnerabilities — UNION/blind SQL Injection and Reflected XSS — via Burp Suite and SQLmap, confirming authentication-bypass risk with complete exploit chain documentation.
 - Delivered 5 CVSS-scored penetration test reports mapping attack chains (recon → exploitation → impact) with prioritized remediation roadmaps for all client engagements.
- Cyber Security Intern** Jun 2025 – Jul 2025
Yale IT Skill Hub Coimbatore, India
- Performed SIEM (Splunk) log correlation across firewall, IDS, and endpoint telemetry, leveraging IOC analysis and MITRE ATT&CK TTP mapping to identify suspicious activity, prioritize high-risk alerts, and accelerate threat triage workflows.
 - Investigated anomalous network behavior and security alerts using structured Incident Response workflows; escalated confirmed threats using documented IR procedures.

PROJECTS

- Phishing Detection Dashboard** | Python, Flask, REST API, Heuristic Analysis | [GitHub](#)
- Built a URL threat detection engine analyzing entropy, typosquatting, and keyword heuristics across 50+ samples, achieving **85% detection accuracy** and reducing false positives by 30%; integrated REST API for SIEM ingestion.
 - Deployed a Flask real-time dashboard for URL risk scoring and threat intelligence visualization, enabling automated phishing triage in SOC workflows.
- HoneyTrap IDS** | Python, Flask, Intrusion Detection, Security Monitoring | [GitHub](#)
- Engineered a honeypot-based intrusion detection system capturing brute-force attacks, unauthorized access, and anomalous network activity in real time with automated alert generation and IP tracking.
 - Produced forensic-ready attack logs supporting Incident Response workflows and threat hunting investigations in SOC environments.
- Tamper-Evident Logging System** | Python, SHA-256, Digital Forensics, Audit Logging | [GitHub](#)
- Designed a SHA-256 hash-chaining audit framework to detect unauthorized log modifications and preserve forensic integrity.
 - Implemented evidence preservation and integrity verification mechanisms supporting digital forensic investigations.

SECURITY RESEARCH & RESPONSIBLE DISCLOSURE

- Vulnerability Assessment — Leading FMCG Company** | CERT-In Disclosure
- Conducted passive OSINT, attack surface mapping, and service enumeration to identify five publicly accessible internet-facing services and administrative interfaces. Prepared a structured responsible disclosure report with risk assessment and remediation recommendations, and submitted it to CERT-In following responsible disclosure practices.

EDUCATION

Nandha Engineering College Erode, Tamil Nadu
B.E. Computer Science and Engineering (Cyber Security) — **CGPA: 8.0/10.0** 2023 – 2027

CERTIFICATIONS

Cisco: Cyber Threat Management, Network Defense, Endpoint Security | **IBM:** Cybersecurity Fundamentals
NPTel IIT Bombay (Elite): Cybersecurity and Privacy | **OPSWAT:** Introduction to Critical Infrastructure Protection (ICIP)
Forge: Deloitte (IAM & Threat Analysis), Mastercard (Phishing), Tata (Incident Response)
TryHackMe / Hack The Box: 40+ Labs, Web Exploitation, Privilege Escalation, CTF Challenges
